

A **MANAGEMENT RESOURCES** STUDY

HOW WE SUPPORTED

A PRIVATE EQUITY BACKED
ENERGY STORAGE FIRM

Who

Our client is a private equity-backed startup in the renewable energy sector, focused on battery storage and selling power back to the grid.

Need

As a new business, our client needed support building out their accounting operations and IT infrastructure, both remotely and within the Chicago-area, tailored to the power and utilities sector.

Solution

Brilliant Management Resources delivered a seasoned implementation strategist with specialized accounting knowledge to guide the buildout and integration of Sage Intacct. To further support the engagement, we placed a Senior Accounting Consultant to collaborate with external advisors and internal leadership on both daily operations and complex financial matters related to energy incentives and credit structures. We additionally identified an outsourced Accounting Professional for accounts payable, financial reporting, and key deliverables.

To meet our client's specialized IT needs, we placed a permanent IT and Controls Engineer who managed vendors, designed control systems, and developed a secure dashboard for local and remote leadership access, ensuring full compliance with industry security standards.

Outcome

We delivered comprehensive support through interim consulting engagements and permanent placements, enabling our client to strengthen their infrastructure and drive key initiatives forward. We remain a trusted partner, consistently delivering timely, integrated solutions that reduce administrative hassle and simplify the onboarding of new talent.

“One of the benefits of working with Brilliant is our ability to move quickly and be flexible. For companies that are just beginning their journey, but need to move fast, this can be crucial. Our pool of resources is one that we value and nurture to ensure our clients can be served accordingly. Our leaders speak the language of accounting, finance and IT which translates to better service and reliability.”
